

CC EX 16b – FIRST AID UPDATE- MEDEVACS:

Task: To perform triage and to stabilize a casualty in order that they may be rescued to a place of safety and further medical care.

Photo courtesy of Bay of Plenty Surf Lifesaving First Aid Project

Scenario:

Casualty is recovered from a vessel that exploded. There are glass shards imbedded in and around the eye.

- How would you stabilize this casualty?
- What precautions would you take and how would you move the casualty to enable evacuation to a place of safety.
- What aftercare would you provide while evacuating the casualty?
- What information would you provide paramedics on reaching the shore?
